Bottom View of Lid in Unlocked Position – Pick Holes Unblocked

**K-Series LockLid™ Inserted Into a Christy N-09 Pull Box and in Locked Position**

(Interior view of box taken from below)

PATENT PENDING

The first product in the Jensen MetalTech LockLid™ Secure Utility Enclosure Lids product line. Pictured is the K-Series of Locking Lids which fits the Christy N-09. **To Lock** – turn fastener on the top of the lid with secure key. Turning fastener draws the cam toward the underside of the lid which pushes the braces toward the interior sides of the box locking the lid in place. **To Unlock** – Unscrew the fastener until it stops which pulls the braces back into the unlocked position.
